

BARR pair-fusion

Population control / opportunity screening / structured recovery

Frozen v0.4B · serial calls

01 Population search

Budget loop and sparse recovery events

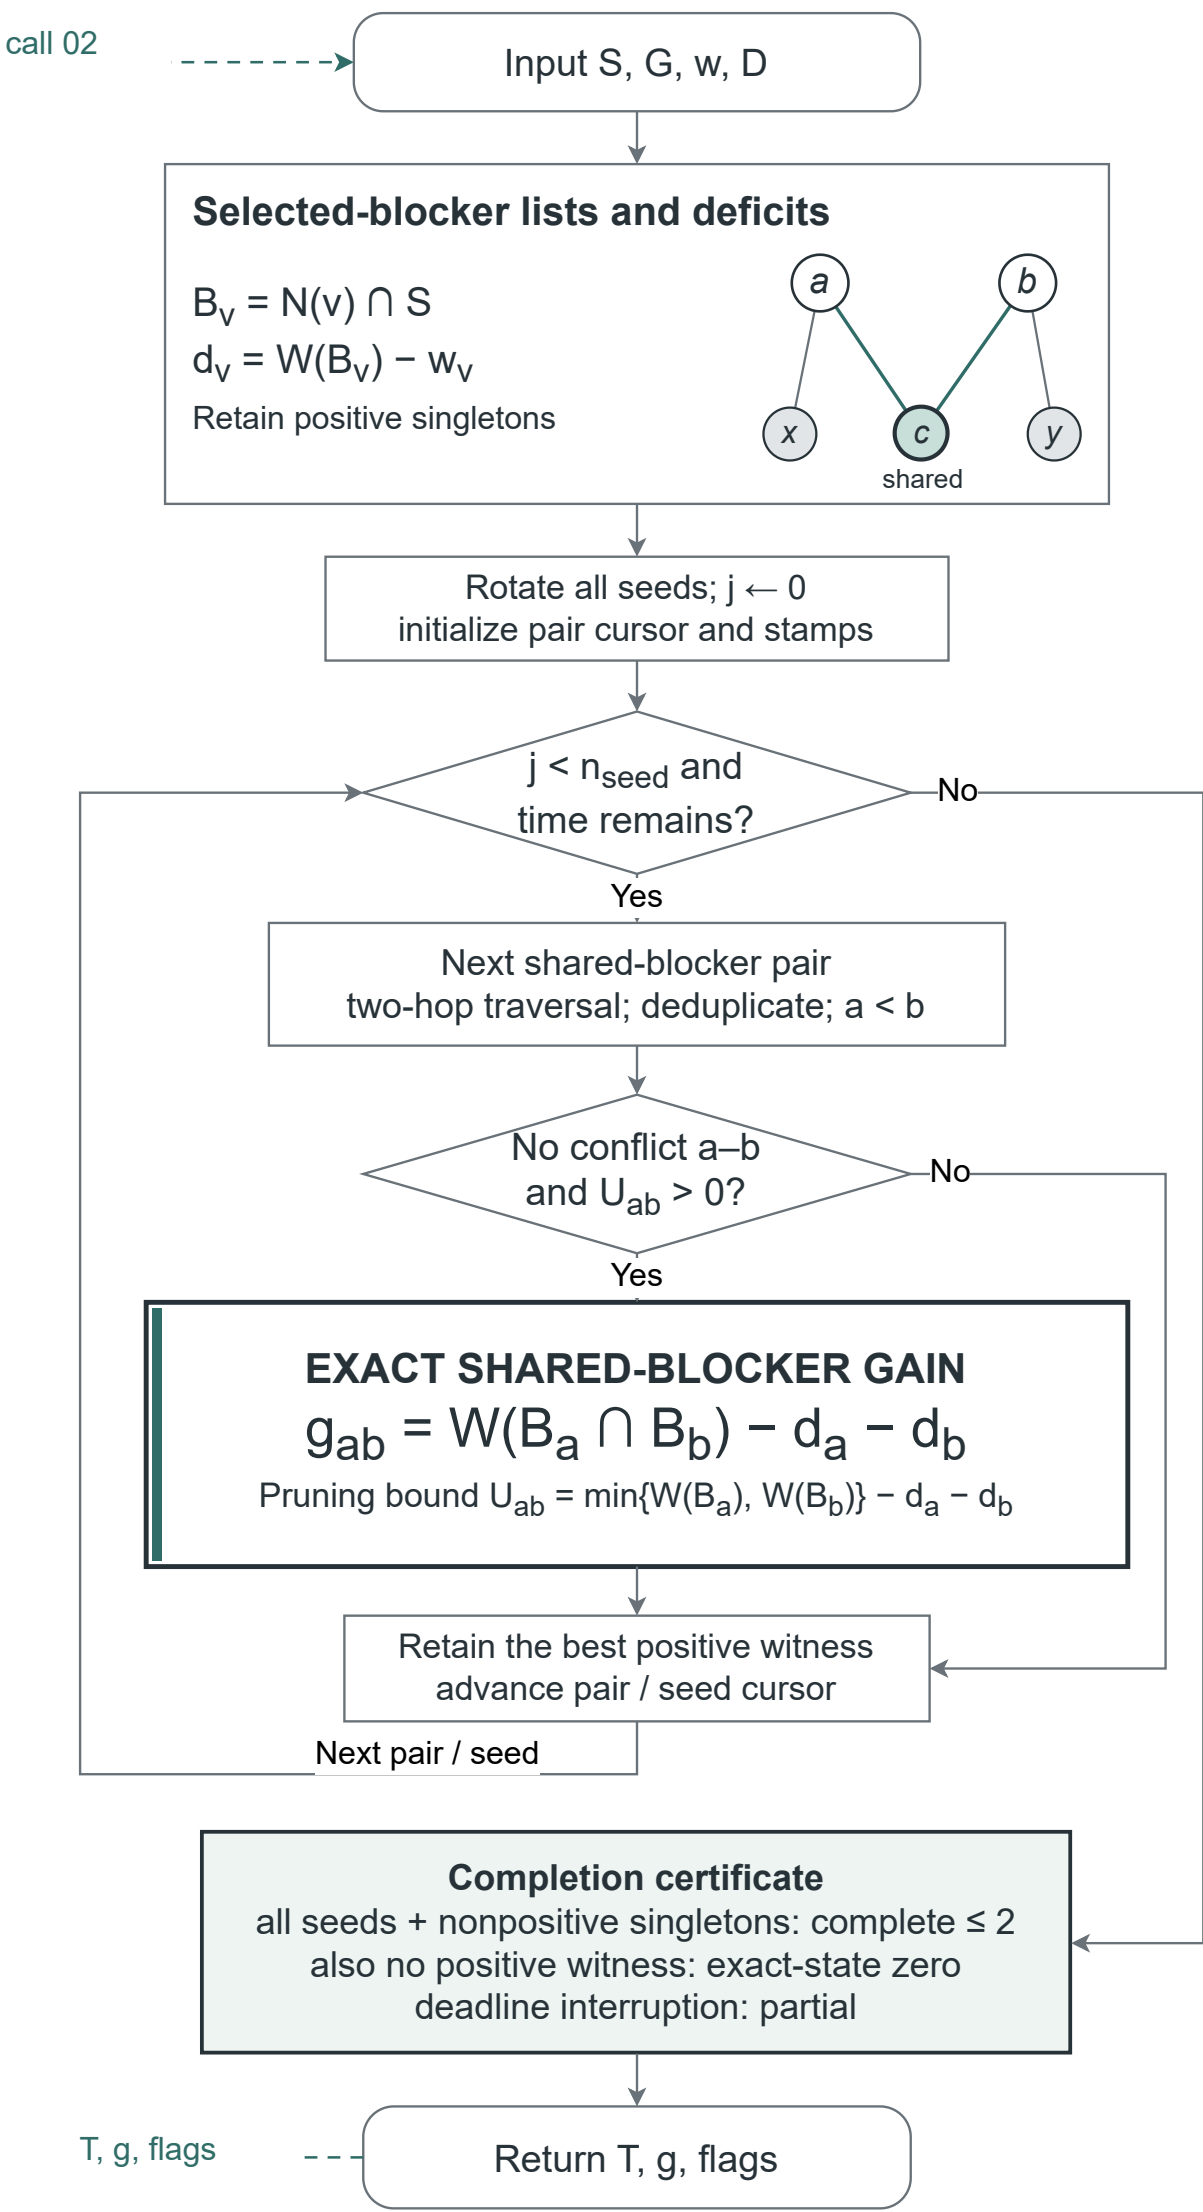

Budget and iteration

Frozen 360 s protocol: K is unset.
The native deadline terminates search; H charges eligible events.

02 Pair screening

Analytical pruning and exact witnesses

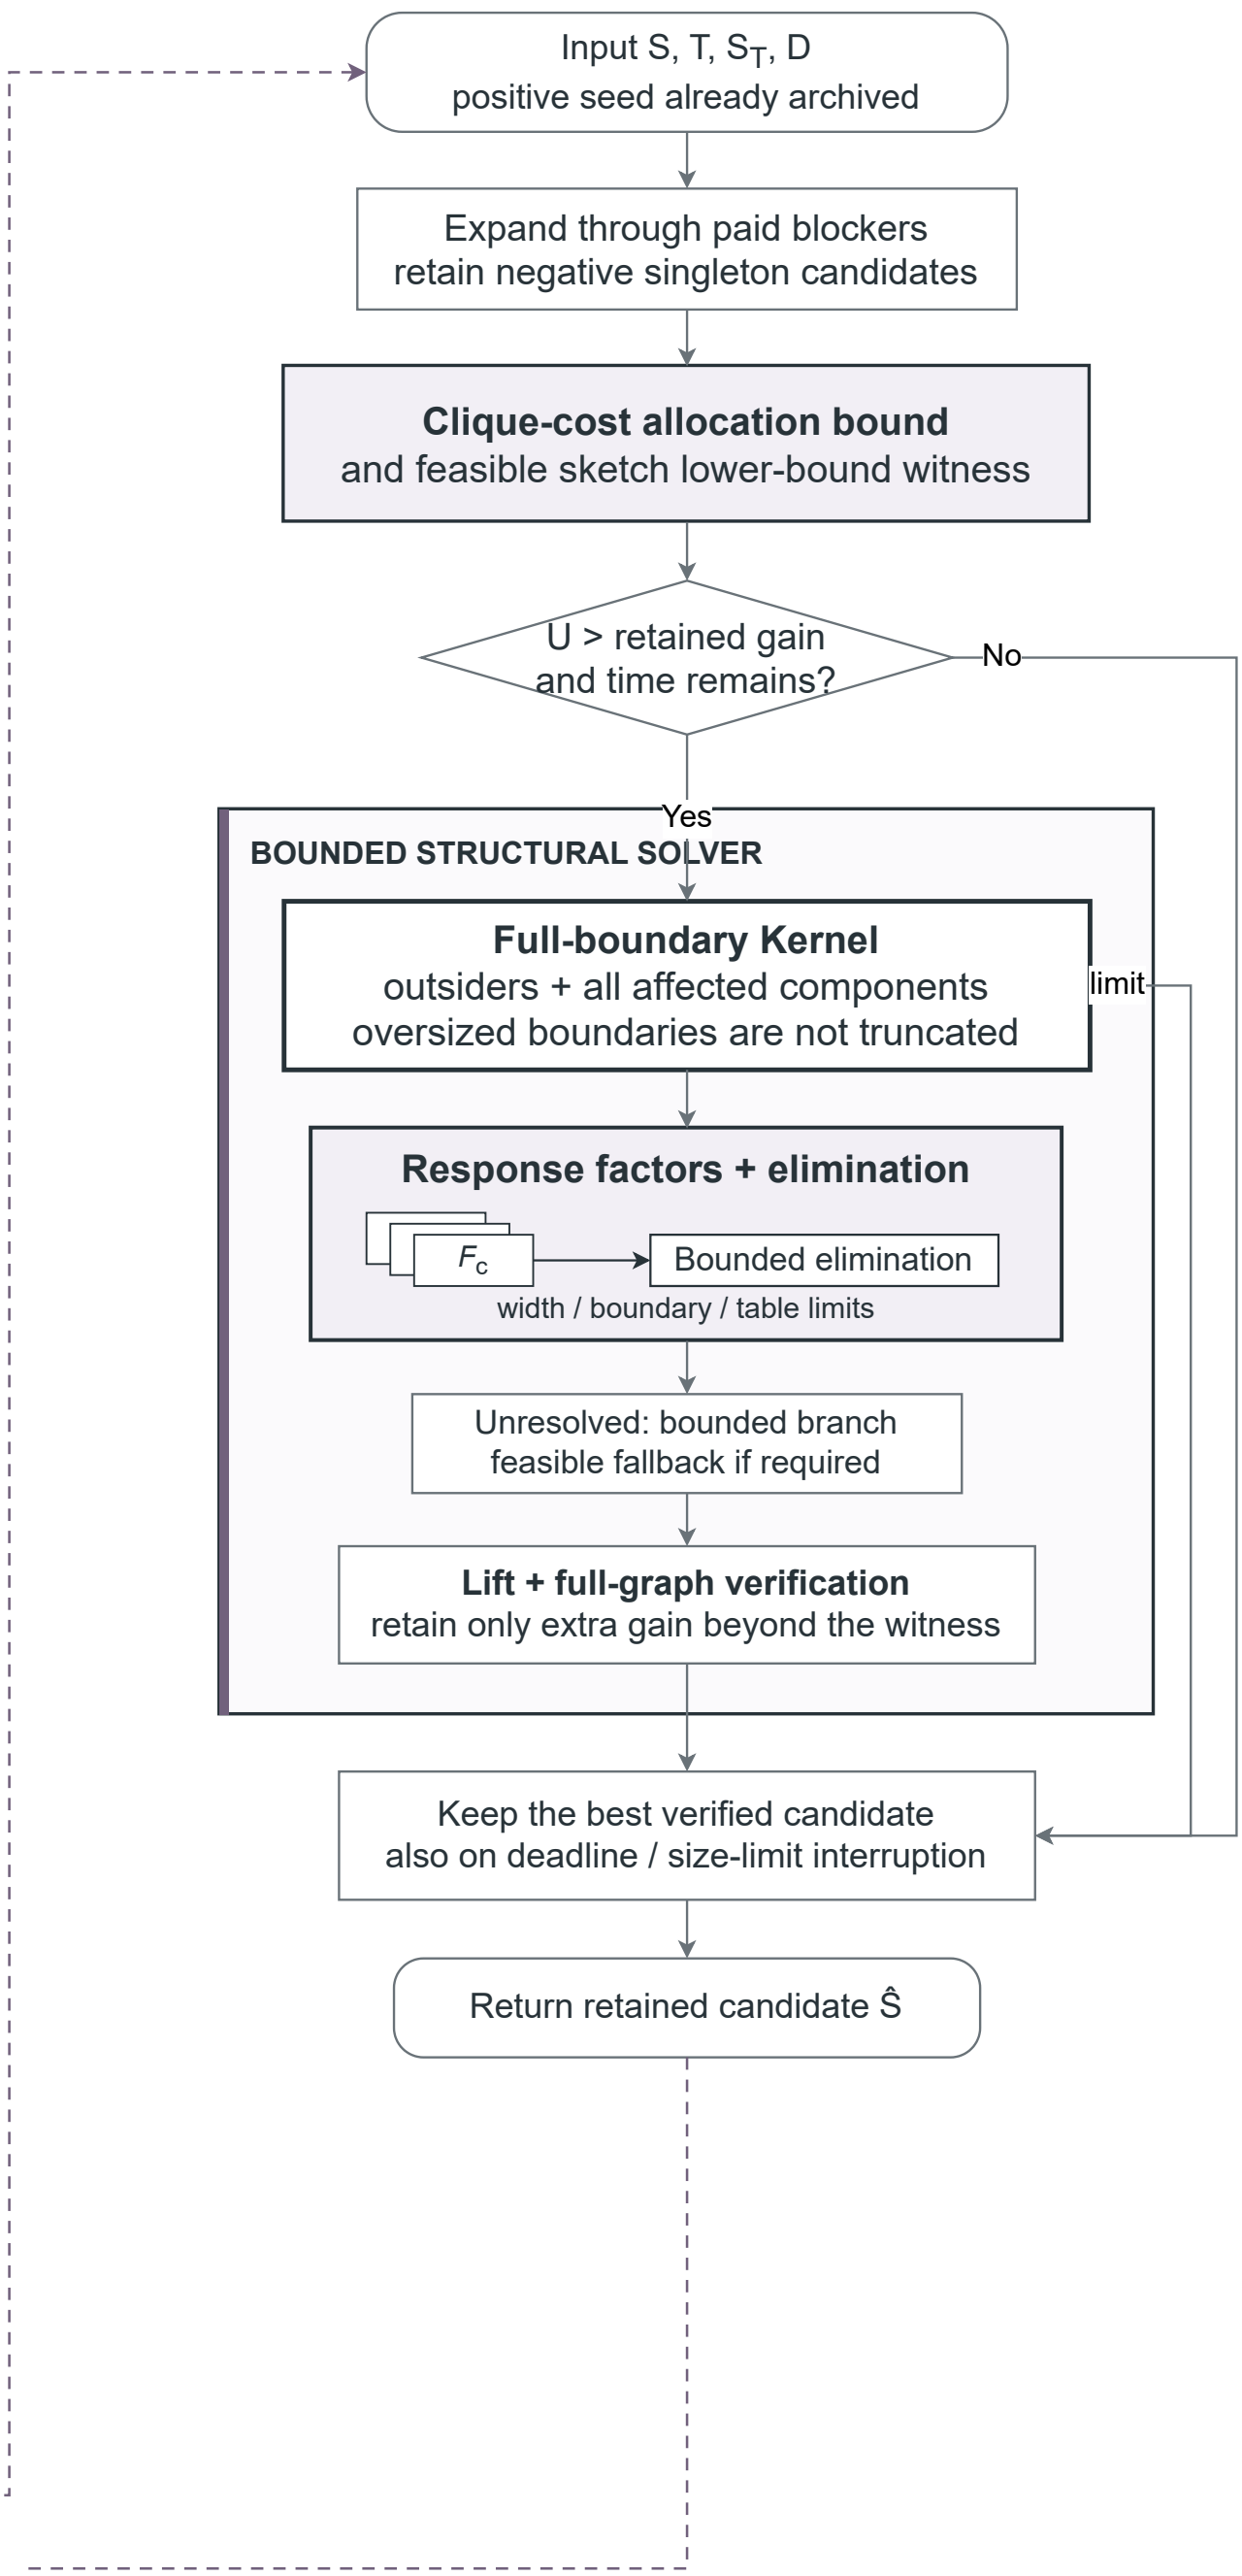

Certificate scope

Exact state, at most two outsider insertions.
Partial $\neq$ zero certificate; no claim for 3+ exchanges.

03 Structured recovery

Seed-preserving bounded refinement

Fixed-state exchange

$g_S(T) = W(T) - W(B(T))$
State gain, archive refresh and budget-endpoint gain differ.
